Broadband Service Inventory

Fayette

Iowa

Updated October 1, 2010

BETA Version

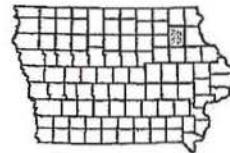

Submit questions or recommended changes to:
map@connectiowa.org

As required by the US Department of Commerce's State Broadband Data and Development Grant Program, if broadband service is available to at least one household in a census block, then for mapping purposes, that census block is reported to have some level of broadband availability. As such, broadband availability at an exact address location cannot be guaranteed. Providers supplying more specific data than census block are displayed separately.

This map represents areas of broadband service availability determined by technical analysis of provider networks and accommodates data for the impact of external factors on service quality. Satellite broadband services may also be available.

Map users are encouraged to participate in improving broadband data granularity through their voluntary field testing efforts. Learn more about this and other broadband mapping facts at www.connectiowa.org.

mapdata@connectmn.org

As required by the US Department of Commerce's State Broadband Data and Deployment Program, providers of broadband service are required to report areas where their service is available at least one household in a census tract. Due to mapping purposes, that same block is reported to have some level of broadband availability. At such, broadband availability of an entire census tract is guaranteed. Please note that mapping over specific data can result in block size displayed as zero.

This map represents areas of broadband service availability determined by in-depth behavioral analysis of provider networks and accommodations for the input of external letters on service quality. Actual broadband service may not be available.

Map users are encouraged to participate in mapping broadband data, geography, fibers, data validation and field testing efforts. Learn more about this and other broadband mapping facts at
www.connectmn.org.

Service areas or unserved areas of the map are indicated by diagonal hatching.

N

As required by the US Department of Commerce's State Broadband Data and Development Grant Program, broadband service is available to the lowest income household in a census tract, then for any price point where it is reasonable to provide broadband service. As each household availability at several address locations cannot be guaranteed, providers specifying more specific data have chosen which households to serve.

This map displays areas of broadband service availability determined by telephone, technical analysis of provider data and accommodations for the impact of economic and service quality. Specific broadband service may also be available.

Maps are encouraged to participate in improving broadband data granularity through data validation and field testing efforts. Learn more about this and other broadband mapping facts at www.connectmn.org.
